

# KEY SAFETY ELEMENTS

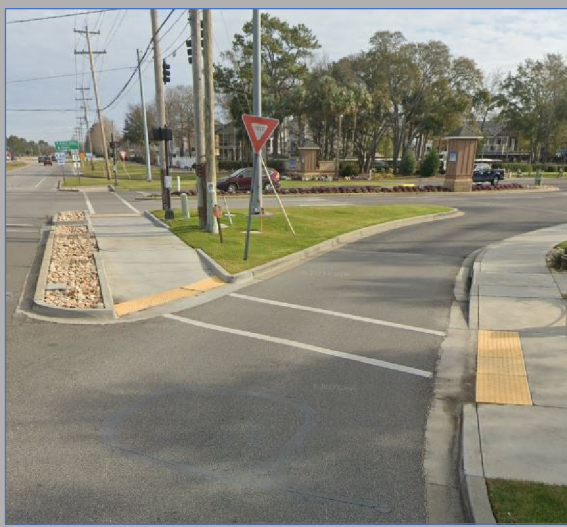

## HIGH VISIBILITY CROSSWALKS

- Heightens awareness of pedestrian crossing locations

## ADA RAMPS

- Improves pedestrian access
- Improvements designed to limit slip, trip, and fall hazards

## LEADING PEDESTRIAN INTERVALS

- Prioritizes pedestrians by providing "walk" signal before vehicles can enter the intersection

## COUNTDOWN SIGNAL HEADS

- Tells pedestrian how long they have to cross the intersection

## ACCESS MANAGEMENT

- Closure of driveways improves mainline traffic flow
- Reduces conflict points

## RETROREFLECTIVE BACKPLATES

- Reduces sun glare
- Enhances visibility of signal

## FLASHING YELLOW ARROWS

- Improves safety of left turning vehicles

## PROTECTED LEFT TURN PHASE

- Decreases number of left-turn crashes

## SIDEWALKS

- Increase accessibility and connectivity to surrounding amenities, transit, and store fronts

## LIGHTING

- Improves driver vision and pedestrian comfort

## RELOCATE CROSSWALKS

- Provides shorter, more direct crossings
- Increases visibility of crossing pedestrians to oncoming traffic

## RAISED MEDIAN

- Improves safety by reducing conflicts
- Provides refuge for pedestrians
